Cardiology Discovery—A New English Official Journal of the Chinese Society of Cardiology

Yaling Han*

President of Chinese Society of Cardiology
Editor-in-Chief of Cardiology Discovery

Despite the recent advances in cardiovascular diagnosis and therapy, cardiovascular diseases (CVD) remain the leading cause of death in the world. The healthcare and socioeconomic burden caused by CVD remains high. Therefore, it is very important to find more effective strategies to prevent and treat cardiovascular diseases, including new pharmacological compounds and devices. The mission of medical academic journals is to create and disseminate knowledge of best practices. Clearly, there is still a need for an open forum to introduce the original research in the cardiovascular field, so as to discuss the research activities of cardiologists and exchange scientific knowledge. Cardiology Discovery has been launched to meet this demand.

The Chinese Society of Cardiology (CSC) was established in 1978 by experts in cardiovascular medicine, cardiothoracic and vascular surgery, cardiovascular epidemiology, and other related specialties. CSC has led the development of cardiovascular medicine, supported the introduction and popularization of new concepts and technologies, established clinical guidelines, and strengthened and promoted China’s international cooperation and exchanges. Over the past 43 years, CSC has developed into the most influential and dynamic professional academic organization in the cardiovascular field in China. Cardiology Discovery is an English academic journal newly founded by Chinese Medical Association (CMA) and the official journal of the CSC. The first issue of Cardiology Discovery will be published by CMA Publishing House in early 2021. This is a peer-reviewed journal, which aims to publish high-quality materials in cardiovascular medicine and surgery, including original articles covering clinical, epidemiological, basic and translational research, health services and outcome research, as well as the state-of-the-art reviews, new technical assessments, case reports, editorial, perspective, experts consensus and guideline papers. Cardiology Discovery has an international appearance, intending to create a platform of international collaboration and cutting-edge information exchange in cardiovascular research and education.

We are honored to recruit internationally recognized leaders in cardiovascular field to form our editorial board, including 56 international and 40 Chinese editorial board members. Moreover, 4 office staff members will fully devote their effort to the journal, responsible for the daily activity of the editorial office. Cardiology Discovery will be published 4 issues in 2021. The number of issues will gradually increase in the next few years, and the goal is to publish monthly within 5 years. The journal sincerely invites authors from all over the world to submit their high-quality research and interesting findings in the fields of cardiovascular medicine and science. We are confident that you will find the journal informative, stimulating, and up-to-date. We encourage you to contribute to the important information source of CVD. We hope that the Cardiology Discovery will make great contributions to the prosperity of cardiovascular academic exchanges and the improvement of cardiovascular science and technology, and become an indispensable item in cardiologist library.

Finally, on behalf of Cardiology Discovery, I sincerely appreciate the warm greetings from Editors-in-Chief of worldwide prestigious cardiovascular journals.
